

# Demonstrate the value and effectiveness of your Vehicle Activated Sign with Data Capture

## Proven Effectiveness

The effectiveness of any product is based on credible statistics. Unipart Dorman's data capture software collects live traffic statistics for every vehicle that passes, enabling our customers to generate a variety of customised analysis reports.

The data generated can be used as clear and strong evidence to local law enforcement agencies, demonstrating a requirement for safety measures to be implemented.

## Demonstrating Value

Our software enables customers to demonstrate that suitable measures have been taken to improve the safety of the highway, proving the effectiveness and value of the sign.

## Data Capture

Our optional data capture software records the total number of vehicles and the speed of the vehicles including dates and times, which can be accessed via Bluetooth® or data cable.

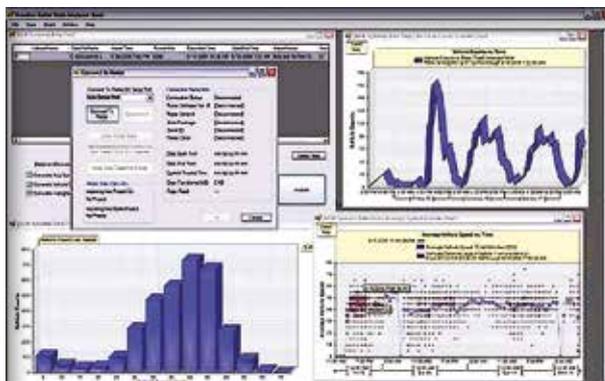

The data can be downloaded into a variety of spreadsheet/graphical analysis programmes and a comprehensive report can be created, including average speeds, maximum speeds and 85th percentile speed, which can be used to determine speed limits.

## Customer Support

All of our speed feedback units are supplied with a comprehensive operations manual, which allows customers to install and operate the sign at its optimum level and maximise the value of the data collected.

## Features and Benefits

- Capture live statistics to prove the effectiveness of your Vehicle Activated Sign
- Identify problem areas and speeding hotspots
- Data can be easily downloaded via Bluetooth® or data cable
- Present evidence to local law enforcement agencies, demonstrating a need for safety measures to be implemented
- Stealth modes on signs can record data without illuminating, an ideal tool for conducting before and after studies of traffic speeds
